

Business Blog Exploratory Analyst:

Most every company want to know how many items they have in their system in real time. In this dataset of books what we will do is to answer the business perspective of every day in a company. How well they perform and what questions can be answered to the stakeholders.

We can take an assumption that they want real time result of the how people will rate the books and who are in the leads to help the authors to know where they stand in the game of books. We have answered the top 10 books that has been rated recently which it can also mention to the authors how do they perform if they perform well they can write a sequel or prequel and maybe new book that can be in the similar interest of the reader. At the end also, authors want to make money for a living and inspire other people to be a writer.

As you can see we have seen an increase in publishing books in the late 2000 according to the dataset that we have. It also means that we don't have enough data to study the growth of books that happened since the publications of books.
